

ReportsLogsBase

```
classDiagram
    class ReportsLogsBase {
    }
    class EventItems {
        + __init__()
    }
    ReportsLogsBase <|-- EventItems
```

The diagram illustrates a class hierarchy. At the top is the 'ReportsLogsBase' class, represented by a rectangle divided into three horizontal sections. The top section contains the class name, while the two bottom sections are empty. Below it is the 'EventItems' class, also a rectangle divided into three horizontal sections. The top section contains the full module path and class name, the middle section is empty, and the bottom section contains the method signature '+ __init__()'. A blue arrow with an open triangular head points from the top of the 'EventItems' class to the bottom of the 'ReportsLogsBase' class, indicating that 'EventItems' inherits from 'ReportsLogsBase'.
